# INTRODUCTION

## What is MidJourney?

Midjourney is a text-to-image AI that generates visually appealing images based on text prompts. Midjourney was created by an independent research lab based in San Francisco called Midjourney, Inc. The main founder behind this model is David Holz, a successful serial entrepreneur.

According to their website, Midjourney's objective is to "explore new mediums of thought and expanding the imaginative powers of the human species"

What sets Midjourney apart from other AI alternatives is its remarkable flexibility, allowing for multiple algorithms and custom parameters to produce a big variety of images.

Unlike several other AI art generators that work on browsers or through APIs, Midjourney currently works based on a Discord bot. In other words, to use the tool and to generate images from text, you need to do so through Discord.

At the time of writing book, the latest version of this model is Midjourney v5.2. This AI image-generation tool became insanely popular since it was released to the public.

To get started, create accounts below:

## Sign up for Discord:

While there are rumors of an upcoming API release, for now, we need to interact with Midjourney through their [Discord Channel](#). Midjourney also released apps for iOS and Android, but for the best results I still recommend using MJ through Discord.

[discord.com](https://discord.com)

## Sign up for Midjourney:

## How to Use Midjourney's Discord Bot

### Step 1: Join the Discord

As highlighted in the [Midjourney Quickstart guide](#), to get started with Midjourney we need to join the [Discord channel](#) here.

### Step 2: Find a Newbies Channel

Once you're in the Discord channel, you'll find few channels for newcomers to test out the model.

### Step 3: Create your first image with the /imagine Command

After you've found the #newbies channel, you can create your first AI-generated image by typing the /imagine command.

**prompt** The prompt to imagine

/imagine

prompt

Next up, you can add a description of the image you want to create in the prompt field and hit enter for the Midjourney bot to start generating. Typically, it takes ~1 minute for the Midjourney bot to generate four image options.

### Step 4: Process the Job

A "Job" is any action that uses the Midjourney bot. You can also use the /info command to check your current jobs running and remaining trial time. Here we've got four options for:

*" A cute cat with white roses, Van Gogh Starry Night inspired "*

[ —q 2 —v 5.1 —s 750 ]

### Step 5: Make variations of your image or upscale

After generating the 4 images, we see there are also two rows of buttons:

- U buttons upscale the selected image
- V buttons create slight variations of the selected image
- and the ↺ button reruns a Job

Let's go ahead and upscale the bottom right image with U3:

Ta-daaa! Picture is ready!

Step 6: Save your image, favourite or upscale redo

Beta Upscale Redo

Favorite

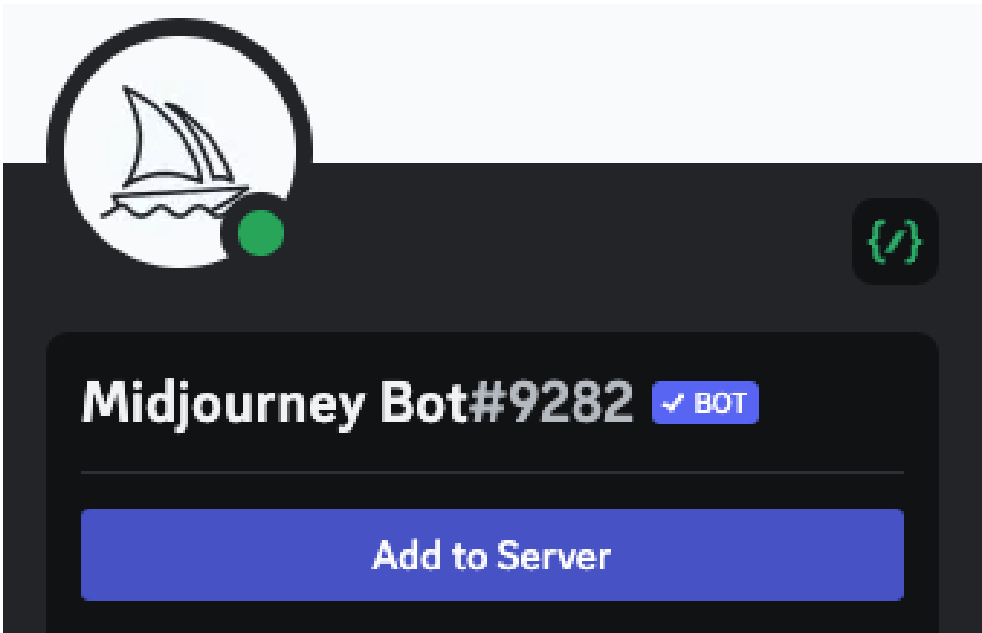

To save an image you can just click on it to open it full size and right-click to save. On official website, you can **easily save multiple artworks** by enabling Select Mode, which is close to search and refresh button.

### Step 7: Setup your own Discord server

Since you're probably not going to want to see all the new images in the #newbies channel, you're going to want to setup your own Discord server connected to Midjourney.

To do so, simply click the "+" sign on the left hand side to add a new server, and then head back to the Midjourney server and click on the Midjourney bot and then "Add to Server"

In my case, I even created multiple channels in the same discord, so it was easier to navigate through all the prompts and categories I have used – realistic images, macro, animals, watercolor, logo, sketch, patterns, etc.

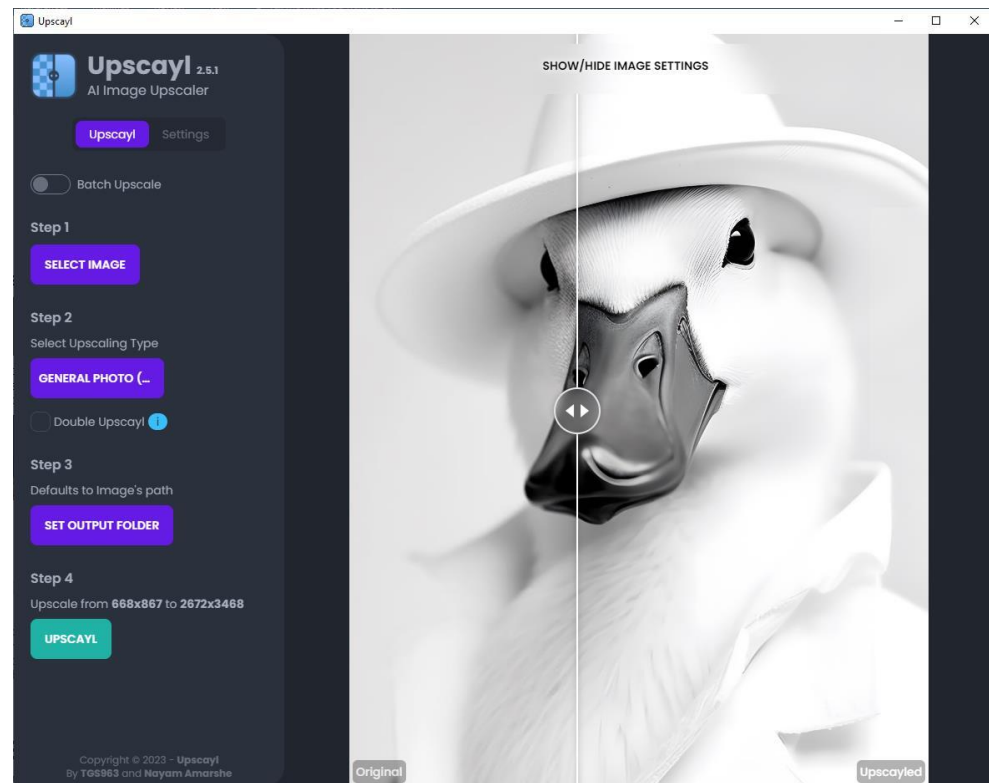

### Step 8: Upscaling images

I have tried multiple upscaling softwares, but most of them are free just for a limited number of images. My favourite is **Upscayl**, offering 6 different Upscaling Types: Real-Esrgan, Fast Real-Esrgan, Remacri, Ultramix Balanced, UltraSharp and Digital Art). There is also the option for

Batch Upscale, image upscale up to 4x and output file as: PNG, JPG and WEBP

## Midjourney Prompts Guide

At first glance, Midjourney may appear quite intimidating, but with a few hours of experimentation, you'll quickly find yourself creating astonishing images. Let's take a closer look at the fundamental usage of Midjourney, techniques for crafting top-notch prompts, and my personal selection of X prompts that I have used for my artworks.

### Basics

In the beginning, it's best to maintain simplicity by describing your desired visuals. Gradually incorporate styles until it aligns with your desired outcome. You'll likely lean towards either an artistic, illustrative style or a photorealistic style. However, the possibilities extend far beyond that, ranging from creating logos, sketches, tattoo designs, comic book art, children's book illustrations, and more. The possibilities are endless, and the results are truly mind-blowing.

In creating a prompt, it is important to remember that Midjourney only pays attention to the first 60 words. So writing in full sentences may hurt you. Instead focus on complete phrases ordered like this:

*[content type], [description - subject + adjectives], [style], [composition]*

To check your default settings, type the command `/settings`. To view information about your account, type the command `/info`.

### Basic Prompts

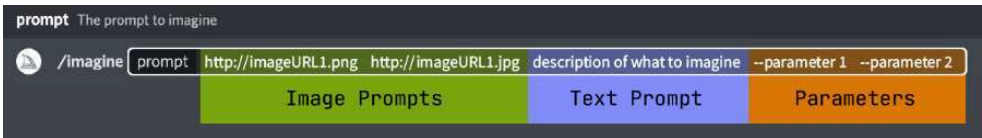

A basic prompt can be as simple as a single word, phrase or emoji

## Advanced Prompts

More advanced prompts can include one or more [image URLs](#), [multiple text phrases](#), and one or more [parameters](#)

## Useful commands for Midjourney

### 1. Aspect Ratios

--aspect, or --ar changes the aspect ratio of a generation. (default square --ar 1:1)

- --ar 2:3
- --ar 3:2
- --ar 9:16
- --ar 16:9

2. Chaos changes how varied the results will be. Higher values produce more unusual and unexpected generations. --chaos <number 0-100>

### 3. No

--no Negative prompting, --no text would try to remove any letters from the image.

### 4. Seed

--seed <integer between 0-4294967295> The Midjourney bot uses a seed number to create a field of visual noise, like television static, as a starting point to generate the initial image grids. Seed numbers are generated randomly for each image but can be specified with the --seed or --same seed parameter. The "--same seed" parameter is incompatible with MJ V5, MJ V5.1 and MJ V4.

### 5. Stylize

Stylize parameter influences how strongly Midjourney's default aesthetic style is applied to jobs. --stylize <number> or --s <number> (0-1000)

### 6. Quality

Quality controls how much GPU processing time is allocated to making the image. The default value 1, so if you want to save some precious Midjourney usage time, while experimenting with prompts, using a lower value is really key.

--quality or --q [0.25, 0.5, 1, or 2]

## 7. Uplight

—**uplight** Use an alternative “light” upscaler when selecting the U buttons. The results are closer to the original grid image. The upscaled image is less detailed and smoother.

## 8. Image Weight

—**iw** Sets image prompt weight relative to text weight. The default value is **--iw 0.25**.

## 9. Version

When it comes to Midjourney versions 1-5.2, the quality of the images improves as the version number increases. Among them, MJ version 5.1 stands out as the fastest and offers the widest range of artistic styles. It also boasts improved resolutions and a dynamic range that enhances the visual experience. If you're looking for a creative or abstract interpretation of your prompt, then the older models are ideal for that purpose. **--version <1, 2, 3, 4, 5, 5.1, 5.2>** or **--v <1, 2, 3, 4, 5, 5.1, 5.2>**

**10. Niji** —**niji** An alternative model focused on anime style images. ( **-niji 4/ -niji 5** )

## 11. Prefer

Adding prompt suffixes are essential for producing the exact image you want in the way you want it. To quickly add suffixes without entering “/settings,” you can type “/**prefer** suffix” to automatically add a suffix command to the end of your prompts. Useful parameters: Aspect Ratio, Quality, Seed, Stylize, Version

## 12. Fast / Relax

**/fast ; /relax** changes Midjourney's image-generating speed between them

## 13. Blend

**/blend** command will prompt the ability to upload two(or more) photos. The **/blend** command may take longer to start than other commands because your images must be uploaded before the Midjourney Bot can process your request.

## 14. Zoom Out

All upscales now have ‘zoom out’ buttons underneath you can use to reframe the image

**[Zoom Out 1.5x]** pulls the camera out and fills in details on all sides

**[Zoom Out 2x]**

**[Make Square]** adds details on two sides to make a non-square image into a square one.

**[Custom Zoom] (advanced)** gives you a popup text box that allows you to change the prompt as you zoom out as well as the aspect ratio or precise zoom

**15. Weird** available in V 5.2, to create weird/edgy images —**weird 0** to —**weird 1000**

## Use ChatGPT to Generate Midjourney Prompts

If you're in need of inspiration, consider using ChatGPT to generate prompts for Midjourney. Simply ask ChatGPT to act as a prompt generator for Midjourney and provide a basic prompt along with any specific details or styles you'd like to include. ChatGPT will then provide you with a more detailed description that can serve as a starting point for your next prompt.

Here's an example of a prompt you can give to ChatGPT to generate Midjourney prompts:

*“Please act as a prompt generator for Midjourney's AI program. I'm looking for detailed and creative descriptions that can inspire unique and captivating images. Keep in mind that Midjourney can understand various forms of language and interpret abstract concepts, so feel free to be as imaginative and descriptive as you can.”*

## About the book

## Camera Angles & Shots

By understanding and experimenting with various camera positions, you can effectively use them to express emotions and support your narrative.

- **Eye Angles** are used to bring the audience closer to the characters, creating a sense of looking them in the eye. This perspective can effectively evoke empathy and convey the characters' inner thoughts and motivations.

*Sony Alpha a7 III camera with a Sony FE 24-105mm f/4 G OSS lens*

- **Low Camera Angles** can be combined with wide shots, medium shots, close-ups, and other common cinematic shots to give a distinct viewpoint and enhance the visual appeal of the image.

*Sony Alpha a7 III camera with a Sony FE 16-35mm f/2.8 GM lens*

*Canon EF 14mm f/2.8L II USM lens on a Canon EOS 5D Mark IV camera with a low-angle tripod*

*Canon EF 70-200mm f/2.8L IS III USM lens on a Canon EOS 5D Mark IV camera with a high-angle tripod*

- **Overhead Shot** is an angle that looks directly down on the subject from above, providing a unique perspective and context.
- **Over-the-Shoulder Shot** captures the view as if you were standing behind someone, showing their shoulder and the back of their head in the foreground.
- **Side Angle** this technique can be used to make the viewer feel involved with the subject, as it puts them at the same eye level. It can also be utilized to highlight movement or direction, as it offers a side view perspective.

*Panasonic Lumix GH5S camera with a Panasonic Lumix 12-35mm f/2.8 II lens*

- **Back Angles** can capture how the subject interacts with their surroundings and give the viewer a clearer understanding of the context. This angle is commonly used in street photography.

*Nikon D850 camera with a Nikkor 70-200mm f/2.8E FL ED VR lens*

- **Ground-level view** can make dramatic shots where the background rises up from the horizon line.

*Canon EOS-1DX Mark III camera with a Canon EF 24-70mm f/2.8L II USM lens*

- **Worm's-eye view** is a camera angle that looks up at the subject from ground level, creating a dramatic and unusual perspective often used to make the subject appear formidable or threatening.
- **Extremely Close-Up** is a type of close-up shot that zooms in on a small section of the subject, uncovering incredibly fine and intricate details.

*Canon EF 100mm f/2.8L Macro IS USM lens*

- **Close-up Shots** are commonly used in portrait photography to capture the subject's facial expressions and emotions.

*Canon EOS 5D Mark IV camera with Canon EF 50mm f/1.2L USM lens*

*Canon EF 24-70mm f/2.8L II USM lens on a Canon EOS 5D Mark IV camera*

- **Full Shot** typically frames the subject fully from head to toe, capturing the entire body within the scene. It's often used to showcase the character's physicality or actions within the environment.

*Canon EF 16-35mm f/2.8L III USM lens on a Canon EOS 5D Mark IV camera*

- **Long Shot or Wide Shot** shows the entire subject along with its environment. For a person, a long shot would typically include the full body, providing context and a sense of scale.
- **Extreme Long Shot** is a type of shot captured from a significant distance, aiming to provide a broader view of the subject within its surroundings. It is often used to set the stage and establish the scene's context.
- **Bird Eye Angle / Drone / Aerial Angle** can give a feeling of being disconnected or distant from the subject, making it appear smaller and less important within the frame. It is also used to highlight the layout or design of buildings, streets, natural surroundings, and other human-made structures.

## PATTERNS

Seamless patterns are an essential part of design. They consist of repeating designs that fit together perfectly, forming a continuous and uninterrupted visual composition. These patterns are highly valuable in many industries, such as fabric design, wallpaper production, and gift wrapping. They offer a chance to incorporate artistic and aesthetic elements into everyday items. By using seamless patterns, art enthusiasts can bring the beauty and essence of masterpieces into their daily routines.

A seamless pattern is a design that smoothly repeats itself without any noticeable seams or breaks when it's repeated or tiled in any direction. It gives a feeling of continuity, where the different elements of the pattern blend together smoothly, creating a seamless visual flow.

Midjourney provides a feature called “—tile” that makes it easier to generate seamless pattern designs. By using Midjourney’s user-friendly interface and advanced features, designers can easily create detailed and visually appealing patterns that repeat seamlessly, without any noticeable seams.

# LOGOS, TATTOOS, STICKERS, T-SHIRT DESIGNS

## LOGOS

Making logos has never been easier. Although it's not mandatory to use the logo produced by this model for your business, **you can at least have a pretty good reference to give to the artist designing it.** In the most situations, it's probably best to have an actual artist finish the job.. However, there are occasions when the logo generated by Midjourney is exceptionally flawless, leading individuals to choose to use it as is.

Before diving into the process of creating logos with Midjourney, I'd like to highlight that text-to-image models currently struggle with generating textual content. The Midjourney team has acknowledged this limitation and intends to incorporate text in your images to be available in one of the latest models.

Nevertheless, you can still generate impressive images using Midjourney, which can later be completed with text using software like Photoshop or similar tools (Illustrator, Canva) to finalize the logo for your brand, company, or website. Now, let's explore the capabilities of Midjourney in the context of logo creation.

### 1.Choose the type of logo you want

#### Lettermark Logo

Lettermarks, or Monograms, are logos that consist of letters, usually brand initials: IBM, AMC, NASA. Many tech companies use a single-letter lettermark (in addition to their wordmark) because this makes a great app icon. ( Facebook, Pinterest).

## PROMPT A

a **lettermark** of letter A, logo, script typeface, vector, simple —no realistic details

Typography vocabulary is your friend:

- > Serif
- > Slab
- > Calligraphic
- > Blackletter

#### Mascot Logo

A mascot is an illustrated character that represents your company. This type of logo is often

seen in businesses related to sports, entertainment, and food and drink.

## PROMPT B

Vector of rhino esports mascot logo design

## Emblems/Badge Logo

An emblem logo consists of font intertwined within a detailed symbol. Think of badges, seals and crests. These logos tend to have a very official appearance, thus they are the go-to choice for schools, universities, countries, military and governmental departments.

## PROMPT C

emblem for a university with large book, vintage —no shading detail realistic color

## 2. Use names of famous designers

By using the names of some of the most [famous logo designers](#), you can basically tell the A.I. to imitate a certain aesthetic or style of that artist.

Here's a longer list of designers you can use:

- Paul Rand – designer of the IBM & ABC logos
- Saul Bass – designer of the Vertigo movie poster
- Massimo Vignelli – designer of the New York City Subway Map
- Rob Janoff – designer of the Apple logo
- Sagi Haviv – designer of the US Open tennis & National Geographic logos
- Ivan Chermayeff – designer of the Chase and Pan Am Logos
- Steff Geissbuhler – designer of the NBC and Time Warner Cable logos

It's also a good idea to use the names of other artists that have their work span in multiple genres, like **Piet Mondrian**, **Pablo Picasso**, **Egon Schiele**, **Paul Klee** (painters) **Yoji Shinkawa**, **Yoshitaka Amano** (character designers) . You can use other types of designers such as [fashion designers](#) and [architects](#) in your prompts.

Remember, not all artists are represented in the model of Midjourney, but most of these examples consistently produced good results.

## PROMPT D

## 3. Describe the artistic technique

Another way to get better results with your prompts is to refer to some artistic techniques. There are certain **proven techniques** that logo designers often use, like making an outline, using gradients, using hard-edge painting, minimalist or imitating a screen-print technique. In my opinion, you should use a modern art style to generate a logo. This will make it more appealing.

## 4. Outline/minimalist/line art techniques

Minimal line marks have been popular for a while now – you can either create images of things or geometric shape and line designs. It can be particularly effective in creating logos that are **simple**, yet **recognizable**.

#### PROMPT E

geometric **minimal** diamond, logo, line, simple, white background

#### PROMPT F

geometric **outline** diamond, logo, line, simple, white background

### 5.Gradient technique

Use gradient marks to give your brand an innovative feeling. You can even specify what colors you want within your prompt. Gradient techniques can be used to add a **subtle**, yet **impactful** style to your logo.

#### PROMPT G

minimal diamond logo, **gradient**, white background

### 6.Screen printing technique

Screen printing, or silk screening, is a printing method where ink is pressed through a fine mesh screen onto a surface, like fabric or paper, to create a design or image. The screen acts like a stencil, allowing ink to pass through specific areas while blocking it in others. This process is commonly used to print logos, graphics, and designs on different materials. It's characterized by bold designs with clean lines and vivid colors.

#### PROMPT H

simple logo of a diamond, **screen-print**, vector —no realistic photo details

### 7.Abstract/geometric technique

An abstract mark is a specific type of graphic logo. Instead of being something recognizable like apple or a bird, it's an abstract geometric form that represents your business.

#### PROMPT I

### 8.Refer to artistic genres/movements

By incorporating various art styles into your prompts, you can create different emotions and specific atmosphere for your logo design. Different art styles have the power to convey unique feelings, allowing you to get the generated logo to a desired vibe.

- **Pop Art**
- **De Stijl**
- **Psychedelic Art**

#### PROMPT K

- Vintage Retro Logo
- 3D Logo
- Modern/Classy Logo
- Feminine/Elegant Logo
- Boho Logo
- Neon Logo
- Transluncent/Glossy Logo
- Futuristic Logo
- Japanese Style Logo

## **4.Tell the AI what not to do**

For the most part, when it comes to logo design you should use some of the above – excluding any text, shadows, and realistic details.

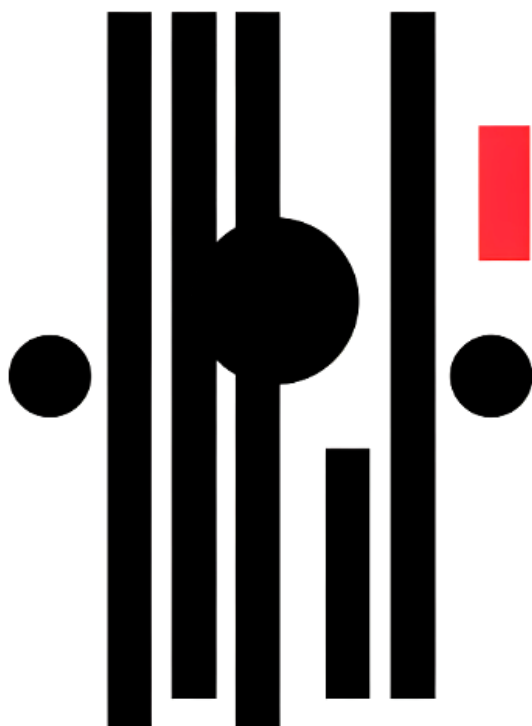

## **Conclusions**

In my opinion, AI will not completely replace the role of a logo designer but rather assist designers in generating ideas more quickly and efficiently. AI serves as a valuable tool to enhance the creative process and augment the capabilities of designers. Besides Midjourney, there are also different AI Logo Creator to create a generic logo. Midjourney is a great tool if you have specific keywords and descriptions in mind, while AI Logo generators produce more generic logos. Experiment and explore with different tools and see which one suits your needs better!

#### TATTOOS

Discovering the perfect design for a tattoo can be a challenging task, particularly when seeking something unique. If you're struggling to find the right design, investing time in generating tattoo ideas with Midjourney can be a worthwhile endeavor. In case you're not too familiar with the different tattoo styles that exist, you might want to learn about them before you start writing prompts. I'll include a section dedicated to the various styles to get your creative juices flowing.

Most of the prompts will get the artwork directly showcased on skin, but an alternative to get just the artwork, is to include —no skin,—no human, white background or concept on paper included in the prompt command. Don't forget to experiment with different versions of Midjourney, since they offer different results. Sometimes using niji 5 and version 4 can give better results than version 5.1.

## SUMMARY

The AI can understand a large variety of prompts and phrases, and these inputs have an impact on the style of the generated image. It is common to use multiple prompts when creating an image, but it's **important** to understand the effect of each individual prompt before combining them together.

As you reach the end of this journey, I hope you feel inspired and empowered to explore the world of Midjourney prompts in your own artistic pursuits. May this book serve as a constant reminder that the creative process is a dynamic and ever-evolving experience, filled with opportunities for growth, self-discovery, and artistic breakthroughs.

Remember that creativity knows no boundaries. Embrace the freedom to experiment, take risks, and embrace the unexpected. Allow the magic of midjourney prompts to spark your imagination and breathe life into your art.
